

GEODE State Policy Roadmaps

Concrete “edge-case” moves states can run to unlock deal flow and bankability.

- UIC Class V primacy playbook
- Thermal Energy Network (TEN) standards
- Stand up a state-to-state capacity exchange
- ~~• (NASEO Accelerator)~~
- Launch a regulatory design lab to rapidly patch rules
- Track what actually moves deployments
- PUCs + energy offices continuous guidance

Project InnerSpace

Realizing Exponential Geothermal Development

The bottleneck isn't resource or authority — it's converting potential into a financeable project pipeline.

- Create credible demand pull
- Expand capable sponsors
- Prove projects quickly
- Standardize contracts & financing
- Cut soft costs

Example: Large Load → TEN

- **Demand pull:** procurement templates
- **Sponsors:** stack (DC + utility + city/campus)
- **Pilots:** 1 flagship “DC + TEN” build
- **Standardize:** Contract kit
- **One-door:** Single clock, single counter
